

The 12 Best Claude Code Features

A practical ranking from 500+ hours in the Claude ecosystem
Honest advice, without the AI hype.

12 Goal `/goal`

A goal with a clear "definition of done". Claude keeps working — with built-in verification — until the criterion is met.

11 Ultra Plan

Offloads planning of big tasks to the cloud — several planning agents running in parallel while you keep working.

10 Insights `/insights`

An HTML report on your Claude Code usage over the last 30 days: what works, what slows you down, which quick wins pay off.

9 Auto Memory

Claude improves its memory automatically between sessions — no prompt needed. It "dreams" and gets smarter over time.

8 Agent Teams

Multiple personas (beginner, CEO, skeptic) debate in rounds until they agree. Experimental — enable it in your settings.

7 Rewind `/rewind`

Roll code and conversation back to an earlier checkpoint — cleaner than patching a mistake after the fact.

6 Sub-Agents

Background agents that work in parallel and report only to the main session. Definable as a Markdown file.

5 Loop `/Loop`

Repeat a prompt at fixed intervals (via cron, bound to the session). Also triggerable in natural language.

4 Remote Control

Drive your local Claude Code session from your phone or the web — fully in sync while you're on the move.

3 Routines

Schedule a real agent (local or cloud), not a simple script — like any normal task you'd give Claude.

2 Status Line

Model, effort level and context usage at a glance. Complemented by `/context` & `/usage`.

1 Skills

Reusable Markdown "recipes" for consistent workflows. Shareable, chainable — the biggest lever in daily work.
